Kingpin/Vegas Luggage Rack & Drag-N-Rest Installation Guide

- 1) Remove fender struts and passenger seat.
- 2) Install your new rack in place of the passenger seat, placing the supplied washers onto the seat bolts with the 'smooth'* side of the washer against the rack to protect marring the chrome (not supplied or necessary on the powder coated racks). Snug down the bolts well, but DO NOT over tighten. A small dab of blue thread lock may be used.
- 3) Reinstall the fender struts.
- 4) You are done, now go ride!

Tip: Always tighten or remove the mounting bolts slowly and gently to minimize marring the chrome. Do not over tighten. Blue Loctite may be used if you don't plan on removing it regularly, but if you wish to clean under your rack frequently it is best to remove the rack for easy access and skip the Loctite.

Installing your Drag-N-Rest Option if so equipped

Simply insert the backrest into the receiver blocks welded onto the underside, ***making sure it is fully seated*** into the receivers. Remove by sliding it out.

And remember... never ride faster than your angel can fly!
