XC Stealth Tank Bib Installation

- 1) Remove side covers.
 - 2) Slide bib, curved edge forward, between the seat and tank and position the front edge no more than to the tip of the seat wing tips. 1" or so back recommended for easiest installation.
 - 3) Wrap the Velcro straps underneath the tank and secure together, strapping the rear first, doing so forward more than down. Pull wrinkles free and secure front strap just enough to hold it in position and remove all wrinkles.
 - 6) Reinstall side covers.
- **Tightening it too much will cause it to possibly slip rearward.**
